Optimum thread performance with Wire Thread Inserts is achieved when the inserts are installed 1/2 to 1 pitch below the surface of the tapped hole. This means that the actual length of an installed insert is equal to dimension Q less 1/2 to 1 pitch. Dimensions S and T allow for tap end clearance of intermediate taps. When using Bottoming and Spiral Flute Taps these dimensions maybe reduced by an amount equal to 2 thread pitches. Any countersink depths must be added to these dimensions.

Number of Free Coils – the number of coils on an un-installed insert counted along the insert length 90° from the tang.

IMPORTANT The success of any drilling and tapping operation is dependant upon many factors -type of material being cut, cutting speed, coolant, equipment being used - and it

is not possible to give specific drill

sizes for each material. Drill sizes

shown are recommendations only and

PowerCoil would strongly suggest that

independent testing be performed for

When using wire thread inserts it is
